Do not hesitate and call me or send me an e-mail.

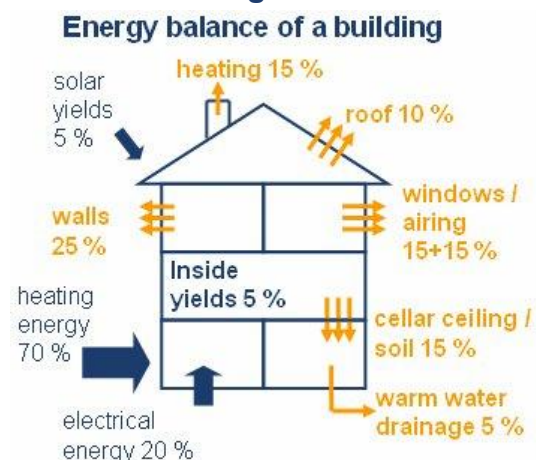

Yours faithfully **Walter M. Gentz**

Interim Management and Consulting - What does that mean?

- Taking over of temporary leadership roles
 - Project management for major and middle-sized plant projects
 - Site management for major and middle-sized plant projects
 - Project management for internal infrastructure projects
 - Project controlling & risk management
 - Quality management
 - Departmental or group leadership in plant-project business
- Analysis and optimization of business processes
- Improvement of energy efficiency of your building
- Competent relief for your company
- More free space for other important things at your agenda
- Make use of my time
- Make use of many years of professional experience

Energy Efficiency in Commercial and Residential Buildings

There is a world-wide agreement to significantly reduce CO₂ emissions by means of energy saving measures, in order to confront the damaging results of climate change. In Europe, around 40 % of the total combined primary energy usage goes to provide heating and electricity in buildings. This makes abundantly clear the importance that must be attached to the energy efficiency of buildings.

Under the programme "**Local Consultations to Save Energy**" the German Federal Office of Economics and Export Control (BAFA) gives grants for consultations with home owners by qualified engineers. BAFA promotes projects of the newly founded Deutsche Energie Agentur GmbH (DEnA = German Energy Agency) by granting federal subsidies. DEnA's task is to obtain lasting improvements in saving energy and a more efficient use of energy in private households, companies and public administration as well as the utilization of regenerative energy resources.

Energy Consulting

If you prefer a neutral and an independent assessment of your building and a quality-assured execution of the energy saving measures, I can offer the following:

- **Energy Knowledge**
A comprehensive knowledge on energy issues with regard to the heating technology and the thermal insulation of your building. Consideration of renewable energy and electric consumers.
- **Energy Consulting at your building**
A detailed on-site consulting with several options for saving energy.
- **Status Report**
A detailed energy efficiency status report for your building.
- **Enquiry for Realisation**
Preparing a technical enquiry for the energy saving measures selected from the building owner.
- **Supervision of Work**
Monitoring of the workmanship of the subcontractors selected.

Are excellent business processes one of the keys to your success?

- Is the responsibility for business processes in your company clearly regulated?
- Are the operational managers in charge for the process improvement?
- Is your IT department for process improvements responsible?
- Is a central quality office in charge to manage the processes?
- Is a consistent process model or a process architecture in place?
- If so, who has the overall responsibility?

The world of business process maps is varied. The cross-functional representation for the optimization is best suited. I show you the way there, including a meaningful process architecture.
